

European Frame Repair Technology Hits US Market With Wedge Clamp System™!

Save Shop Space and Labor!

Body shop owners are fast realizing that today's industry demands are making the frame repair equipment of yesterday obsolete. Profits depend on productivity, and the old style frame racks and benches consume an inordinate amount of precious bay space and labor and time. The Wedge Clamp System™ revolutionizes frame repair by equipping every technician with a bay that anchors, measures and pulls, moving work through the shop faster than ever before. A fully equipped Wedge Clamp System™ costs a fraction of a typical frame rack whilst outperforming a typical rack in every category. For the cost of one rack you could get three times the productivity with Wedge Clamp™!

WEDGE CLAMP™ TECHNOLOGY NOW PREDOMINANT IN INTERNATIONAL MARKETS

The Wedge Clamp System™ takes up just a fraction of the space of a frame rack or bench and disassembles in minutes - leaving your bay open for other repair operations. With 10 tons of pulling power, a wide array of adapters (including the brand new luxury car adapter)

and the ability to anchor unibody and full frame vehicles, the versatile Wedge Clamp System™ exceeds the repair capabilities of a typical frame rack. Wedge Clamp Systems™ prides itself on its constant research and development of new products to boost the productivity of bodyshops around the world. Wedge Clamp™ is thus proud to announce a trio of fantastic new productivity tools - the Luxury Car Adapter™, Eze Tie Down™ light hit repair system and the versatile new Full Frame Anchoring System™.

The Wedge Clamp System™ anchors the damaged vehicle at the ideal height for collision diagnostics and repair - no more awkward clambering up and down a frame rack platform! No wonder Wedge Clamp has met with such phenomenal success in international markets as diverse as Europe, Russia, Israel, Japan, Australia and South Africa and England.

AWARD-WINNING MEASURING SYSTEM TAKES PRODUCTIVITY TO NEW HEIGHTS

The Wedge Clamp also features the integrated 3-dimensional Pivot Measuring

System™ which ensures that vehicles are repaired to factory specifications. With patent awards worldwide, the Pivot Measuring System™ uses a patented rotating/telescoping action to access the entire vehicle from a single mounting point. It may be used independently as a damage appraisal system or together with your straightening equipment during a repair. Accuracy is beyond question as the system remains mounted to the vehicle throughout the repair. The system self-confirms that its calibration is correct and automatically eliminates factory build-tolerance in the vehicle. The versatile mounting bracket makes damage assessment fast and easy whether the vehicle is on or off your straightening equipment.

Wedge Clamp - building performance bays.
