NACE BOOTH 5620**

EQUIP EACH BODY TECH WITH FRAME REPAIR EQUIPMENT THAT MOVES WORK THROUGH THE SHOP FASTER!

To increase technician productivity AND maximize production capacity you have to equip every body tech with their own frame repair equipment.

The Wedge Clamp System is so affordable and space efficient – you can now equip every body man! It is full featured and powerful so it can handle any job, large or small, full frame or unibody, productively.

In fact the Wedge Clamp System does everything a frame rack can, for one-third of the price of a typical rack!

The Wedge Clamp System features the Pivot Measuring System that is used to

reduce the repair time, improve the quality of the job and minimize re-dos.

The Wedge Clamp System is simple to use and easy to train on. Vehicles can be set up in under ten minutes while eliminating the loading and unloading issues associated with frame racks and benches.

Find out why the Wedge Clamp System is causing so much excitement in bodyshops across the globe, including Europe, Russia, Israel, South Africa and Canada!

Let us show you how easy to use and productive the Wedge Clamp System is with our FREE video or CD.
